We conducted our audit in accordance with the Standards on Auditing specified under Section 143(10) of the Act. Those Standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement. An audit involves performing procedures to obtain audit evidence about the amounts and the disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal financial control relevant to the Company's preparation of the financial statements that give a true and fair view in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on whether the Company has in place an adequate internal financial controls system over financial reporting and the operating effectiveness of such controls. An audit also includes evaluating the appropriateness of the accounting policies used and the reasonableness of the accounting estimates made by the Company's Directors, as well as evaluating the overall presentation of the financial statements. ### Detailed explanations of ratios

#### 1 Current Ratio:

The Current Ratio is a liquidity ratio that measures a Company's ability to pay short-term obligations or those due within one year. It is calculated by dividing the current assets by current liabilities.

Current Ratio = Current Assets / Current Liabilities

Current Assets (Numerator) = Inventories + Trade Receivables + Cash & Cash Equivalents + Short Term Loans &

Current Liabilities (Denominator) = Trade Payables + Other Current Liabilities

#### 2 Debt-Equity Ratio:

The ratio is used to evaluate a Company's financial leverage. It is a measure of the degree to which a Company is financing its operations through debt versus wholly owned funds. It is calculated by dividing a Company's total liabilities by its shareholder's equity.

Debt Equity Ratio = Long Term Debts / Shareholder's Fund

Long Term Debts (Numerator) = Long Term Borrowings

Shareholder's Fund (Denominator) = Share Capital + Reserves & Surplus

#### 3 Debt Service Coverage Ratio:

Debt Service Coverage Ratio = Net Operating Income / Total Debt Service

Net Operating Income (Numerator) = Net Profit Before Tax

Debt Service (Denominator) = Interest + Principal Repayment

#### 4 Return on Equity Ratio:

Return on equity is derived by dividing net income by shareholder's equity. It provides a return that management realizes from the shareholder's equity.

Return on Equity Ratio = (Profit after Tax - Preference Dividend) / Ordinary Shareholder's Fund

Numerator = Profit after Tax - Preference Dividend

Denominator = Ordinary Shareholder's Fund

#### 5 Inventory Turnover Ratio:

Inventory Turnover is the number of times a Company sells and replaces its inventory during a period. It is calculated by dividing turnover by average inventory.

Inventory Turnover Ratio = Cost of Goods Sold (Numerator) / Average Inventory (Denominator)

#### 6 Trade Receivables Turnover Ratio:

The above ratio is used to quantify a Company's effectiveness in collecting its receivables or money owed by customers.

The ratio shows how well a Company uses and manages the credit it extends to customers and how quickly that short-term debt is collected or is paid. It is calculated by dividing turnover by average trade receivables.

Trade Receivables Turnover Ratio = Net Credit Sales (Numerator) / Average Accounts Receivable (denominator)

#### 7 Trade Payables Turnover Ratio:

This ratio is used to measure the number of times the business is paying off its creditors or suppliers in an accounting period.

Trade Payables Turnover Ratio = Net Credit Purchases (Numerator) / Average Accounts Payables (Denominator)
